## Child abuse in the context of intimate partner violence against women: the impact of women's depressive and posttraumatic stress symptoms on maternal behavior.

Boeckel MG<sup>1</sup>, Blasco-Ros C, Grassi-Oliveira R, Martínez M.

### Author information

### Abstract

Intimate male **partner** violence against women has been recognized as an important public health problem, with a high impact on women's mental health, including depressive and posttraumatic stress disorder (PTSD) symptoms. However, fathers who have been involved in intimate **partner** violence (IPV) have an increased probability of being violent toward their children. The aim of this study was to assess the relation between the mental health status of abused women, their **partner's** violence toward the children, and their maternal behavior.

**KEYWORDS:** battered women; **child abuse**; children exposed to domestic violence; domestic violence; mental health and violence
